Reasons for Allowance

Claims 1-14 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: the best prior art of record, Blecker et al., taken alone or in combination of other references, does not teach or fairly suggest a method or a buffer comprising, among other things, the first transistor pair, the second transistor pair, the bias transistor, and the first current source are configured such that current through the main input transistor pair is maintained as the common voltage input varies; and the second current source and the folding transistor isolate the bias transistor and the second transistor pair from a drain voltage of the first transistor pair, thereby causing the first transistor pair and the main input transistor pair to have a common drain bias (claims 1 and 6); and isolating the bias transistor and the first transistor pair from a drain voltage of the second transistor pair, thereby causing the second transistor pair and the main input transistor pair to have a common drain bias; and squeezing the tail current as the voltage input is decreased, thereby increasing a gate voltage of the bias transistor and allowing current through the main input differential pair to remain nearly constant (claim 12), as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
